

Dear Eminence Elementary 5<sup>th</sup> Grade,

We as a restaurant in your community are coming to you because we need some help. We know you all are the brightest and happiest customers around so we figured we would ask you first. If you are up to the challenge.

We have recently come into an issue with customers having to constantly use their phones to calculate tips. Often their tips aren't even what they should be as well. Our staff is at a loss and we need you! I imagine you have been into our restaurant before but if you haven't I have supplied a menu for you! I think what would be best is if you group the prices of items together first so then you have a range of prices. (This should take you about two days) I need you to be as precise and quick as you can as I don't want this issue to get even more out of hand and have to lay off some of my servers.

Next what I would recommend doing is once you have your prices sorted. I would find the different number of tips for each price range. For example, for the 7.49\$ food items find what the tip should be at 10%, 15%, 20%, and 25%. I would do this for each group of priced items. (This will take about three days) Then you could create an insert for the bill card or even find a way to incorporate it into the menu by redesigning the menu. You can choose. (This will take you three days' max) Remember when creating this insert that some people may order more than one item. So, come up with a solution as to how they would then calculate the price of the tip overall.

So, I am expecting to hear back from you by the 20<sup>th</sup> of September. That's a week and a half of planning! I hope you can come up with a good solution!

Thank YOU 5<sup>th</sup> GRADE!

Hometown Pizza Manager Kim
